

“Back in Circulation” – Read p. 126 to 129 in the HBS book and answer these questions using short answers:

1. What parts make up the human circulatory system?
2. What are arteries? Where do they lead?
3. What are veins? Where do they lead?
4. What happens in the capillaries?
8. Where has blood in the left side of the heart come from? Where has blood in the right side of the heart come from?
9. What is the upper chamber of the heart called? What are the lower chambers of the heart called?
10. What separates the right and left sides of the heart?

Please label the heart diagram below. Include the following parts:
vein from upper body, vein from lower body, arteries to the body, veins from the lungs,
septum
